- **494m @ 0.3% COPPER EQUIVALENT IN HOLE 55 AT MAJOR NEW PORPHYRY DISCOVERY AT JOHN HILL PROJECT.**
- **INITIAL METALURGICAL TESTING OF DISCOVERY HOLES REVEALS EXCELLENT METALURGICAL PROPERTIES.**
- **JOHN HILL DRILL PROGRAM TO RECOMMENCE IN JUNE.**

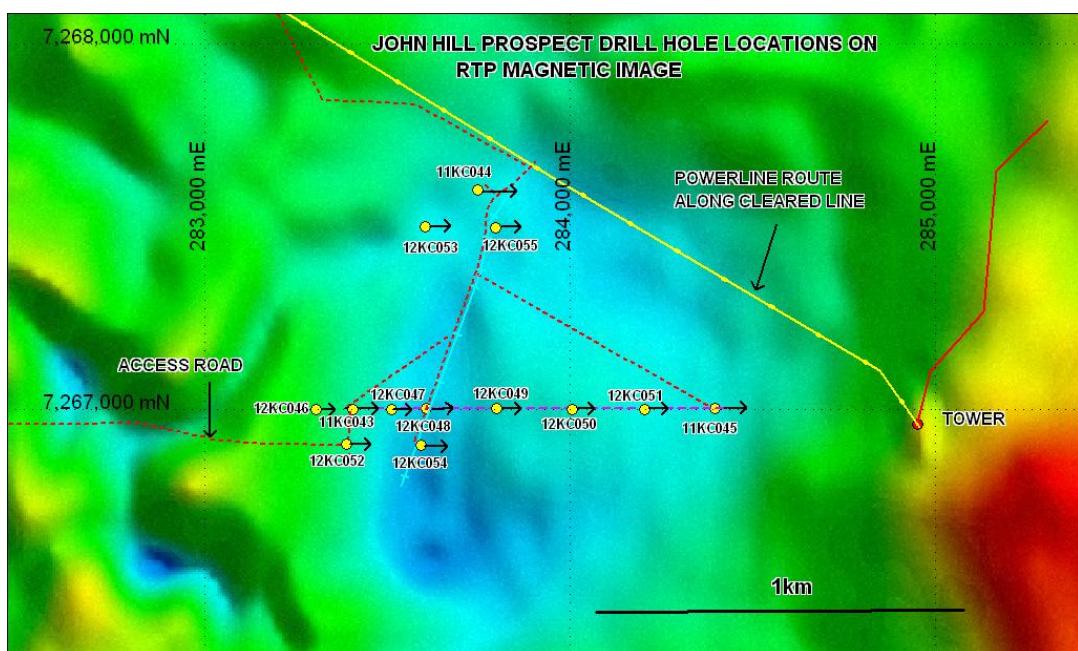

### John Hill Project Highlights

- 13 holes (3,252m) drilled to date at John Hill:
  - strike length (north–south) of 700m;
  - width (east–west) of 1,300m; and
  - to a depth of 550m.
- Remaining assay results (Appendix 2) at the John Hill Project (DD holes 45, 51, 55, & RC hole 53) reinforce previous announcement (23<sup>rd</sup> Feb, 2012) of the discovery of large, mineralised porphyry.
- Contains similar polymetallic mineralisation to Greater Whitewash Project, except that the assays show a dominance of copper.
  - contains significant molybdenum and silver credits.
- Initial metallurgical testing confirms ore responds well to floatation:
  - rougher flotation recovered 91% of the copper, 75% of molybdenum, 65% of the silver.
- Mineralisation is open in all directions including at depth.
- Mineralisation commences at or near surface.
- Complements already large Greater Whitewash Project due to proximity.

**Figure 1:** Shows an overview of the location of John Hill, Kiwi Carpet and Greater Whitewash Project.

**Figure 2 Below:** Shows the drilling to date at John Hill Project (magnetic background).

## New Discovery at John Hill

The John Hill Project is situated 10km north, and along strike, of the large JORC resource at Greater Whitewash Project and 2.5km south, and along strike, of the Kiwi Carpet Copper Project.

Assays for holes 45, 51, 53, and 55 (Appendix 2) reinforce the existence of a large porphyry system with potentially ore grade mineralisation occurring over a wide area and with very thick intersections (+400m). Mineralisation is still evident in the bottom of three out of four of the above holes. These holes were terminated due to technical limits of the rig. (See Appendix 1 for photos of select core from John Hill)

Another drilling program at John Hill is being planned and expected to commence in June.

Like Greater Whitewash, John Hill is a polymetallic deposit. However due to the dominance of copper at John Hill, and in keeping with the JORC code, the following results are quoted in copper equivalent.

1. Copper Equivalent Calculation:

*Cu Eqiv Formula = Copper grade + (Molybdenum grade \* 4.1 + Silver \* 136)*

*Metal Prices used: Copper = US\$3.50/lb, Molybdenum = US\$14.28/lb, Silver = \$33/oz*

*The information in this report that relates to exploration results is based on information compiled by John Leslie Goody, Executive Director of Exploration, Aussie Q Resources Limited and supervised by Dr. Richard Haren who is a Member of The Australasian Institute of Mining and Metallurgy and who has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity undertaken to qualify as a Competent Person as defined in the 2004 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Dr Richard Haren is a self employed consultant who works for AQR and has consented to the inclusion in this report of the matters based on his information in the form and context in which it appears.*
